Connect Reading & Science with 12 Fun Learning Activities from The Nocturnals Book Series.

**Turnkey Activities**
- Hold a Book Club with our Discussion Questions.
- Perform The Nocturnals Reader’s Theater.
- Fill in the Story & Create Your Own Adventure!
- Write a Rap or Give a Cheer for Your Favorite Nocturnal!
- Play the Endangered Animal Matching Game!
- Discover New Words with Word Search & Sight Word Games.
- Use Nocturnal Animal Bingo & Learn Wacky Animal Facts!

**Hands on Makerspace Programs**
- Construct a Model Crater & Learn the Impact of a Meteorite!
- Make The Nocturnal Brigade with Animal Heart Crafts!
- Build Your Own Model Volcano from a soda can!
- Draw Your Own Images of The Nocturnal Animals to Create Trading Cards.
- Create Nocturnal Brigade Masks!

We hope you and your middle grader will attend for a book discussion, games, crafts, and puzzles to keep summer reading fun and cool!

ACTIVITIES INCLUDE:

- Nocturnals’ Bingo
- Word Games
- Making Animal Trading Cards
- Creating Paper Nocturnal Animals
- Building an Erupting Volcano

_The Nocturnals_ by Tracey Hecht is a non-episodic middle grade series that follows the adventures of three unlikely animal friends—Dawn, a fox; Tobin, a pangolin; and Bismark, a sugar glider. In each critically acclaimed book they solve mysteries with friendship, teamwork and humor.
THE MYSTERIOUS ABDUCTIONS

BOOK CLUB QUESTIONS

• Dawn, Bismark and Tobin make up a team, the Nocturnal Brigade. How did the Brigade meet? What qualities do each of those three characters possess that help make them work so well together? Do they have qualities that might hurt the team?

• Dawn is the leader of the Brigade. What does she do to bring the animals together as a team? What does she do when she meets Ciro the coyote? How does she talk to Boris the crocodile when she meets him? Do the animals respect her?

• When Tobin first meets Cora the wombat, Cora is afraid to speak. How does Tobin try to coax her out of her shyness? What things could you reveal about yourself that might make someone in your life feel less shy around you?

• Why don’t Dawn and Bismark trust Jerry the jerboa? What does he do to the Brigade that makes them worry about his character? Does he redeem himself in the book?

• Bismark speaks many languages, as do the bats. What languages are in the book? Are you able to give examples of phrases in any of these languages? Can you come up with some new phrases that Bismark might say? Can you come up with some that the bats might say?

• Explain the rules of NOC HOC. Which animals are used as equipment in the game? Discuss the actions of the offense and defense.

• What happens to Boris in the final scenes of the book? What are the other characters’ responses to his actions? How would you have handled Boris?

• What things in the book would you have done like the Brigade? What things would you have done differently?

• Discuss the meaning of poaching and endangered species in the wild. Are any of the animals endangered species? Why is poaching wrong? How do both effect the environment?
THE OMINOUS EYE
BOOK CLUB QUESTIONS

• Define the word “ominous” and discuss the qualities of mystery, horror and adventure. Does The Ominous Eye fit in these genres? What other genres would the novel fit? What genres would it not fit?

• All story plots contain a conflict, a climax and a resolution. What is the conflict in The Ominous Eye, and how is it introduced? What is the climax? The resolution?

• The members of The Nocturnal Brigade are all different animals. What is the advantage of this? How does Tobin use his long tongue to save Bismark? What characteristics do Dawn and Bismark have and how do they help the Brigade on their adventures? How would the Brigade be different if they were all the same animal?

• If you were to pick one character from the book who is the most like you, who would it be and why? Who is the most unlike you and why? Which character from the book would you most want as your friend and why?

• The Nocturnal Brigade wears capes when they set out to solve a mystery. What is the purpose of the capes? Do you think it makes the Brigade more courageous and brave? Can you think of other examples of stories where the characters wear special garments to help them feel brave?

• How is Dawn the voice of reason within the Brigade? How does the “beast” almost destroy these qualities in her? Does the dangerous situation strengthen or weaken Dawn as a leader throughout the story? How so?

• Polyphema gains control over the animals. How is she able to do this? Why does she do it? How does each member of the Brigade respond differently to Polyphema’s control?

• How does Polyphema use Otto, the owl, to create further panic? Does her plan work? What role does Otto play in helping the Brigade discover the truth?

• Who is the real source of the destruction and mayhem in the valley? What clues help you discover that there is no “beast”? How does Dawn discover the real source? How does Dawn deal with Polyphema?

• Discuss the concept of fear and what role it plays in the story. What do the animals learn about fear from Polyphema’s false story? What does Polyphema learn from the Brigade? Can you think of other animal fables with similar lessons?

• What things in the book would you have done like the Brigade? What things would you have done differently?

• Discuss the role humor plays in The Ominous Eye, both for you as the reader and for the characters. What characters do you find the most humorous? What part did you find the most humorous? How would the book be different without humor?
The Nocturnal Brigade embarks on a heroic adventure in *The Fallen Star*. At what point is it obvious that the Brigade has to solve a mystery? Do they plan their mission, or do they react as new clues develop? Which would you do?

Dawn, Tobin, and Bismark wear capes when they set out to solve a mystery. What is the purpose of their capes? Do you think the capes help the Brigade feel more courageous? What challenges do they encounter as they set out to solve the mystery of the fallen star?

If you were to pick one character from the book who is the most like you, who would it be and why? Who is the most unlike you and why? Who would you most want as your friend and why?

Dawn becomes alarmed when she, Tobin, and Bismark discover the enormous fallen star that has crashed into the valley. What is the difference between alarm and fear? Describe a time when you felt alarmed. How did you handle the alarming situation?

Bismark wants to fight the star creatures. What is Dawn’s plan? How is it different than Bismark’s? Why does Tobin agree with Dawn? How does Dawn’s plan lead to a satisfying conclusion?

Tobin eats the poisoned pomelo fruit. How does he try to convince himself that he is okay? Tobin knows that he should tell his friends that he tasted the fruit. Why does he keep it to himself? What would you do in this situation? What leads to Tobin’s confession? What was Bismark’s reaction to Tobin’s news?

What is the purpose of the magic berry that Bismark has in his possession? Why is he conflicted about when to use it? How does Bismark decide when to use the magic berry? Did he make the best decision for the Brigade, himself, or both?

Bismark says, “Everyone knows you can’t trust anything that isn’t perfect. That’s why I only trust myself.” No one is perfect. Describe Bismark’s imperfections. Does Bismark trust the Brigade? Why does teamwork require trust?

Aye-Aye Iris, a lemur, knows the secret of the fallen star. How does knowing the secret make Aye-Aye Iris feel important? Explain how Aye-Aye Iris prioritizes her own importance over the well-being of the other animals. Why is this not okay?

Dawn tells Aye-Aye Iris, “It’s our differences that make us unique.” Describe the physical and personality differences of each member of the Brigade. How do the Brigade’s differences make them stronger? What are Aye-Aye Iris’s differences? Why is it important to accept everyone’s differences?

Think about what the Nocturnal Brigade did throughout *The Fallen Star*. What would you have done similarly? What would you have done differently?

The Nocturnal Brigade rescues animals in need of help. List the animals they rescue in *The Fallen Star*. Which one is your favorite animal? Explain how your favorite animal was a victim of Aye-Aye Iris.
• At the beginning of *The Hidden Kingdom*, the Nocturnal Brigade hears a familiar sound, but they aren’t sure what it is. Explain why they accuse Tobin of making the sound. How do they determine the source of the sound?

• Describe the tumbleweed that Dawn finds. What is the purpose of the tumbleweed as the story advances? What about the mysterious voices, churning ground, swirling tree bark, and disappearing water? How are these clues that something evil is the cause of the drought?

• Discuss the false hope that the animals experience on their quest to solve the mystery. Even Dawn is confused by the strange events. How do the flowers give them hope again?

• How is Bismark his own worst enemy when the Brigade comes face to face with King Kami, a chameleon? What is Tobin’s role in saving Bismark?

• Bismark says the fight between Tobin and King Kami is a “tongue-of-war.” How does such wordplay make the plight of the Nocturnal Brigade humorous? In what other ways do the authors create humor?

• Discuss King Kami’s explanation for causing the drought. What is the moral of the story? King Kami creates havoc in the forest. How does he help the Nocturnal Brigade save the animals in the forest?

• Think about what the Nocturnal Brigade did throughout *The Hidden Kingdom*. What would you have done similarly? What would you have done differently?

• Fear is an underlying theme in the entire Nocturnals series. Compare and contrast the way the animals deal with fear in *The Hidden Kingdom*. How does the personality of each animal explain the way each animal confronts fear?
How to Become a Member of The Nocturnal Brigade

Directions: Take turns choosing a word for each part of the speech to help the Nocturnal Brigade fill in the story. If you’re playing alone, fold along the dotted lines to hide the story.

1. Members always meet at night in front of the big _______ when the moon is _______ and the stars are _______.

2. The group _______ a cape made from _______ snakeskin that Bismark _______ took from one of our _______ who attacked him in the _______ forest.

3. We like to eat _______ pomelos, a/an _______ fruit that looks like a _______ and tastes like a _______.

4. We help other _______ animals when they are in trouble in the _______ forest that is filled with many _______.

So, if you think you can _______ by these guidelines then you can be a member of the Nocturnal Brigade!
Help The Nocturnals Discover the Villains!

Dawn, Tobin and Bismark have met many villains on their nocturnal adventures. Each of the ______ villians are ______, and ______ the other animals in ______.

1. Boris the Crocodile is ______ leader of the Croc team and has an ______ voice. When Boris ______ the entire forest hides and ______ to ______ to escape the ______ crocodile gang.

2. Polyphema the Tuatara uses her third ______ to help her ______. She tries to ______ gain the trust of the other ______ animals but Dawn doesn’t trust her ______ stories about ______.

3. Iris the Aye-Aye has ______ teeth and ______ claws. She uses her third ______ to tap tap tap the ______ which makes everyone ______. Iris says, “Beware of the ______ in the moonlight.”

Directions: Take turns choosing a word for each part of the speech to help the Nocturnal Brigade fill in the story. If you’re playing alone, fold along the dotted lines to hide the story.

What Are Sight Words?

Sight words are high-frequency words that can be difficult to “sound out.” By learning to recognize sight words, new readers can focus on decoding more complex sentences.

The Nocturnals Sight Word Cards are broken into sets so you can grow the deck as your emerging reader’s confidence grows. All the words appear in The Nocturnals Grow & Read titles and are based on the Fry and Dolch lists—the two sight word lists most widely used in early literacy instruction. Use these cards to play the games below, boosting literacy practice and family fun at the same time!

**Silly Voices**

Each player draws a card and reads the word aloud in a different silly voice, taking turns until the pile is finished.

Read words as Dawn, Tobin, Bismark, or another animal. Read with different emotions. Try reading as a pirate or while holding your tongue.

**Memory**

Place the cards facedown. A player turns over two cards and reads the words aloud.

If they match, the player keeps them. If not, the player turns them over and repeats with different cards, using memory to locate the pairs.

**Go Fish**

Deal five cards to each player and place the remaining in a “pond” pile.

Players read aloud from one of their cards and ask another player if he or she has a card with the same word. If so, the player must give over the card; if not, he or she has to “go fish,” drawing another card from the pond.

Continue until the pond is empty. The player with the most pairs wins.

**Nocturnal Brigade**

Add one Nocturnal Brigade card to the deck. Shuffle and deal all the cards.

Each player identifies the pairs he or she has, reading off the words and discarding the pairs. Each player takes turns taking a card from the player to the left, reading and discarding pairs as they form.

Continue until all cards are matched and one player has the Nocturnal Brigade card.

Welcome to *The Nocturnals* Bingo! Get ready to play games with some furry, and not-so-furry, friends. This bingo game is extra special because instead of having letters and numbers, each square has the name of an animal featured in *The Nocturnals* book series. The game features the three main characters: Dawn, a red fox; Bismark, a sugar glider; and Tobin, a pangolin. It also has all kinds of other creatures—bats, coyotes, crocodiles, and more—on the cards. We’ll call out the name of each animal along with a fun fact about that species, and you can mark it on your board. Fill five squares in a row, and you’re the winner!

**Wacky Animal Facts**

**Pangolin**
- Pangolins are covered in scales that look like armor, and while they may look strange, they’re actually made of something called keratin. Take a look at your fingernails. Your nails are made of keratin, too, just like Tobin’s scales!
- Just like skunks, pangolins spray something smelly when they feel threatened or scared. This keeps predators from getting too close.

**Sugar Glider**
- Unlike humans, sugar gliders don’t need flashlights to see in the dark. Because their eyes are positioned on the side of their heads, they have excellent night vision.
- While playing in the mud might sound fun to you, sugar gliders hate being dirty. They’re constantly cleaning their fur and polishing it using a special substance that comes out of their eyes.

**Red Fox**
- Red foxes are the largest species of fox, but they’re still quick on their feet. They can run up to thirty-five miles per hour and can even climb onto the branches of trees as long as they’re not too high up.
- Have you ever seen a dog bury a bone and come back to it later? Red foxes like to do this, too. They often hoard and store large amounts of food in different locations to find when they’re hungry again.

**Crocodile**
- Dogs aren’t the only animals that use barking to communicate—crocodiles make a similar noise. They use different barks to communicate all kinds of things, including a special bark to warn other crocodiles about danger.
- Sometimes all that swimming can make a crocodile cold. Instead of grabbing a towel to warm up, they like to lie in the sun on flat rocks near the water.

Welcome to "The Nocturnals" Bingo! Get ready to play games with some furry, and not-so-furry, friends. This bingo game is extra special because instead of having letters and numbers, each square has the name of an animal featured in "The Nocturnals" book series. The game features the three main characters: Dawn, a red fox; Bismark, a sugar glider; and Tobin, a pangolin. It also has all kinds of other creatures—bats, coyotes, crocodiles, and more—on the cards. We’ll call out the name of each animal along with a fun fact about that species, and you can mark it on your board. Fill five squares in a row, and you’re the winner!
### Tuatara
- A tuatara might look like an ordinary reptile from far away, but if you look a little closer, you can see that the tuatara has something that sets it apart from other reptiles—a third eye on the top of its head.
- The name “tuatara” means “peaks on the back.” These reptiles have small spikes running from the top of their necks to the end of their tails.

### Aye-Aye
- Aye-ayes are known for their gigantic tails, which are often more than double the size of the rest of their body.
- Aye-ayes might look like rodents at first, but they’re actually primates, which means that they’re related to chimpanzees, apes, and even humans.

### Kiwi
- Kiwis can’t see as well as humans and have very poor eyesight. To identify their surroundings, they use their keen sense of smell and little whiskers on the base of their bill, which allow them to feel around.
- Unlike some social animals, kiwis are very shy and solitary. They travel in groups of six to twelve but like to seek shelter in their own burrows and will usually hide from other animals.

### Tarantula (spider)
- Scared of a tarantula’s bite? Don’t be! A tarantula’s main form of attack is shooting the tiny barbed hairs on its body at attackers.
- Tarantulas might look a little scary, but they’re mostly harmless. A bite from a tarantula might hurt a little, like being stung by a bee, but it’s not poisonous.

### Blue-Bellied Snake
- These snakes might look a little scary, but they’re not mean. Blue-bellied snakes are naturally shy and won’t bite unless they’re threatened.
- You won’t find a Blue-bellied snake in your backyard or garden. Blue-bellied snakes are native to Australia and can be found in inland areas in the Southeast.

### Bat
- If you snacked like a bat, you’d eat your weight in insects every day. An average bat can eat more than a thousand insects per hour. That’s a lot of bugs!
- Some people think of bats as being related to vampires because they feed on blood, but most bats subsist on fruit and insects.

### Scorpion
- Missing your night-light? Scorpions glow blue underneath UV light because of fluorescent chemicals in their exoskeletons.
- Hungry? Scorpions can go six to twelve months without eating. They’ll eat one huge meal and store it and burn it slowly over time.

### Coyote
- While coyotes are known for being fast on land—they can run up to forty miles per hour—they’re also great swimmers! They’ve even colonized islands!
- Coyotes have a hard time being quiet. They’re known for their loud calls and make over eleven different noises with distinctive meanings.
<table>
<thead>
<tr>
<th><strong>Jerboa</strong></th>
<th><strong>Wombat</strong></th>
<th><strong>Falcon</strong></th>
<th><strong>Owl</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Don’t let size fool you! While the jerboa may only be a few inches tall, it can jump up to ten feet!</td>
<td>• Like many other nocturnal mammals, wombats could benefit from a pair of glasses. They have poor eyesight but make up for it with great hearing and a keen sense of smell.</td>
<td>• Falcons aren’t picky about where they live. You can find them in forests, deserts, tundras, mountains, and just about everywhere else.</td>
<td>• If you try to do something sneaky behind an owl’s back, chances are it’ll catch you. Owls can rotate their heads 270 degrees, almost all the way around, so they don’t miss a thing.</td>
</tr>
<tr>
<td>• Jerboas have excellent hearing and use sounds and even vibrations to understand their surroundings and to communicate.</td>
<td>• Wombats love being underground. They’re known for constructing elaborate tunnel systems in the deep sand.</td>
<td>• A little-known fact about falcons is that they’re excellent singers. Pairs of falcons are known for singing duets before sunrise as a way to let other falcons know where their territory is.</td>
<td>• Owls are known for swallowing their prey whole and then spitting up the bones later. Yuck!</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Sloth</strong></th>
<th><strong>Tasmanian Devil</strong></th>
<th><strong>Boar</strong></th>
<th><strong>Crab</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Sloths aren’t exactly full of energy. They sleep about fifteen hours a day.</td>
<td>• Tasmanian devils are known for making loud shrieks and calls that can sound a little scary, which is partly why they’re called “devils” in the first place.</td>
<td>• You wouldn’t want to give a piggyback ride to a boar. They can weigh over 600 pounds!</td>
<td>• A lot of crabs walk sideways, which can look a little strange. However, some can walk forward and backward, and some crabs are great swimmers!</td>
</tr>
<tr>
<td>• If you ever gave a sloth a lollipop to lick, it might be gone pretty quickly, since sloths can extend their tongues a full foot out of their mouths.</td>
<td>• Tasmanian devils like to sleep under rocks or in caves, logs, and burrows. They can only be found in Tasmania, an island in Australia.</td>
<td>• Wild boars like to live in large groups of six to twenty, called sounders. Females are more likely to stick to the pack and protect their babies, while males tend to leave the sounder and venture out on their own.</td>
<td>• A crab would make an excellent band member since crabs mostly communicate through drumming. They also snap and wave their pincers.</td>
</tr>
</tbody>
</table>
**Wolf Fish**
- The wolf fish is not your average sea creature. Some species of wolf fish can be up to four feet long and way up to eighty-eight pounds.
- A dentist would have a hard time with a wolf fish since they have large fangs flanked by three rows of teeth on each jaw.

**Milk Snake**
- Milk snakes are on the larger side, growing up to sixty inches long. That’s one big reptile!
- These creatures are called “milk” snakes because they’re commonly found near barns, so farmers used to think they drank cows’ milk.

**Honey Badger**
- Honey badgers have long claws on each of their four feet. These claws help them run quickly, scoop out fruit, and grab prey.
- These creatures are called honey badgers because they’re known for preying on beehives and eating the bee eggs and honey inside.

**Flock**
- A flock of owls is called a parliament, but you won’t see one very often. Owls are usually solitary creatures, preferring to spend time alone rather than in a flock.
- The term for a flock of vultures changes depending on what they’re doing. Vultures in flight are called a kettle, those in trees are called a committee, and those that are eating are called a wake.

**References and Helpful Links for More Information**
Make a Model of a Crater and Learn the Impact of a Meteorite

Problem
How does a meteorite’s size and distance from the surface of Earth affect the formation of a crater?

Inquiry-Based Skills
Data collection, measurement, observations, controlling variables, analyzing data, drawing conclusions.

Materials (per group)
- 12- to 15-quart dish tub
- Newspaper
- 2-pound bag of flour
- Cocoa powder
- Meter stick
- Metric ruler
- 3 meteorites (rocks or marbles: one small, one medium, and one large)

Procedure
1. Make a prediction of how the size of a meteorite will affect a crater’s formation.
2. Make a prediction of how a meteorite’s distance from Earth’s surface will affect a crater’s formation.
3. Lay out some newspaper to protect your work surface. Set the tub in the middle of the newspaper and carefully pour flour into the tub until the flour is about 4 cm deep. Lightly shake the tub to make sure the flour’s surface is flat.
4. Sprinkle just enough cocoa powder to lightly cover the surface of the flour.
5. Have one group member hold the meter stick next to the tub and identify the 25-cm mark.
6. Have another group member drop the small “meteorite” from a height of 25 cm.
7. Without removing the “meteorite,” use the ruler to measure the diameter of the crater. The diameter is the length from one side of the crater to the other. Record the measurement in the data table.
8. Repeat steps 6–7 with the medium and large meteorites, making sure to drop them in different areas of the tub so you have three different craters.
9. Compare the three different craters and record any observations in the data table.
10. Remove the three meteorites and gently shake the tub to smooth out the flour and flatten the surface. Sprinkle the surface again with cocoa powder.
11. Repeat steps 5–10 for each height: 50 cm, 75 cm, and 100 cm. Be sure to measure and record the data for each drop and crater, along with other careful observations.

</tbody>
</table>

Analyze and Conclude

1. Compare your data results to your predictions. Were your predictions correct? Explain.

2. Describe the differences between the crater made by the large meteorite dropped from 25 cm and the one dropped from 100 cm.

3. Using your observations of the impact crater, describe how the area and living things around it would be immediately affected.

4. Earth has been struck several times in the past by meteorites, some larger than 50 meters in diameter. Explain why many of these craters cannot be seen today.

1. WHAT IS A VOLCANO?
Deep inside the Earth is an extremely hot core, which heats a layer of the Earth called a mantle. The mantle is made up of very hot rock that is continuously moving in convection currents. These currents allow the rock of the mantle to soften when it’s closer to the core. As the softened mantle mixes with gasses and water, it becomes less dense, slowly rises and magma is formed. Magma usually stays below the Earth’s surface, or its crust. Sometimes the molten magma finds a weak spot in the crust and comes to the surface forming a volcano.

HOW IS IT FORMED?
All volcanoes are formed over a pocket of magma, which geologists call a magma chamber. With enough pressure, the magma will move upwards through a pipe in the center of the volcano, until it can leave through vents. At the top of a volcano there is a main vent and many small vents along the slopes. Once the magma leaves the vent onto the Earth’s surface, it is now called lava, which pours out of the vents until the pressure inside the volcano is released.

2. Use the materials and instructions below to create a model of a volcano and show your children a demo of how a volcano erupts.

MATERIALS NEEDED:
- Baking pan
- Soda can
- Moist soil or play dough
- Baking soda
- Vinegar
- Red food coloring

PROCEDURE:
Step 1: Place the baking pan on a level surface. Set the soda can in the middle of the pan.
Step 2: Mound and shape the moist soil or play dough around the can to form a mountain. Bring the soil (or play dough) right up to the top of the soda can’s opening. Be careful not to get any soil or play dough inside the can.
Step 3: Pour one tablespoon of baking soda into the soda can.
Step 4: Color one cup of vinegar with red food coloring.
Step 5: Pour the colored vinegar into the soda can. Have your children observe the red foam that spills out of the top and down the soil like lava from a volcano.

3. Explain what’s going on to your children. Explain that the baking soda is reacting with the vinegar to produce carbon dioxide gas and that the gas builds up enough pressure to force the foaming liquid out of the top of the can.
4. Discuss what the foaming liquid represents—inside the volcano it’s called magma, but once it reaches the surface it’s called lava. References and helpful links include:

NEXT GENERATION SCIENCE STANDARDS USED IN THIS ACTIVITY

4-ESS2-2: Earth’s Systems
• Analyze and interpret data from maps to describe patterns of Earth’s features.

ESS2.B: Plate Tectonics and Large-Scale System Interaction
• The locations of mountain ranges, deep ocean trenches, ocean floor structures, earthquakes, and volcanoes occur in patterns. Most earthquakes and volcanoes occur in bands that are often along the boundaries between continents and oceans. Major mountain chains form inside continents or near their edges. Maps can help locate the different land and water features where people live and in other areas of Earth. (4-ESS2-2)

<th><strong>PANGOLIN</strong></th>
<th><strong>SUGAR GLIDER</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Pangolins are covered from just above their nostrils to the tips of their tails by rows of hard, overlapping, movable sharp-tipped scales. They are between 79 and 88 cm, including their tails which are prehensile (or capable of grasping.) These very rare animals are mainly solitary and very timid. Pangolins move quickly when threatened and are strong diggers and climbers.</td>
<td>Sugar gliders are very small creatures with their head and body measuring 12-33cm and their tail somewhere between 15-48mm. They have a gliding membrane from the outer side of their forefoot to their ankle of the rear foot, enabling them to glide up to 45 meters. One of a sugar glider’s most distinguishable traits is the stripe down their back to the end of their nose and on the sides of their faces.</td>

<thead>
<tr>
<th><strong>FOX</strong></th>
<th><strong>WOMBAT</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Red foxes are not always red; their coats range in color from a pale yellowish to a deep brown with white or ashy undersides. Red foxes are 45-90cm long with tails 30-55cm long. Their graceful frames can run up to 48km/h and jump up to 2m high. Foxes often live in dens that have been abandoned by other animals</td>
<td>Wombats have thick stocky bodies about 1 m long. These large headed creatures have small eyes, pointed ears, and long whiskers. Wombat’s eat grass with their continuously growing molars. Their bad eyesight and good sense of hearing and smell leads this animal to bury tunnel systems in deep sands.</td>

**Jerboa**

Jerboas are incredibly tiny with their body measuring 7-9 cm and their tails 15-16 cm. The rodents have ears that are one-third longer than their head helping them to use vibrations and sound to communicate. Due to their small size, these creatures hunt in the night to remain safe.

For more information visit www.nocturnalsworld.com

**Kiwi**

Kiwis are flightless birds about the size of a chicken. They are shy, mainly solitary animals that will usually try to escape threads instead of attacking. Due to poor vision, kiwis utilize their long bills to dig deep into the ground to find creatures to eat, which includes worms, insects, and crayfish.

For more information visit www.nocturnalsworld.com

**Crocodile**

Crocodiles range in size with males measuring up to 7m long and females up to 3m long. They hunt in water with only their eyes and nostrils exposed. With their heavyset jaws containing 64-68 teeth and their ability to eat under water, crocodiles just have to lunge to capture their prey. Most people are unaware that crocodiles bark to communicate.

For more information visit www.nocturnalsworld.com

**Coyote**

Coyotes excellent sense of hearing and smell make them fit for the life of a nocturnal. They can run up to 65 km/h and jump 4m. It’s no secret that coyotes are extremely vocal animals but some would be surprised how secretive they are. Coyotes form packs and live in dens that they find or they dig their own.

Middle Grade Books Ages 7-12
Trim: 5 ½” x 8 ¼” • Hardcover $15.99 • Paperback $8.99 • ebooks available for all titles
Bonus paperback content includes animal glossary, author Q&A, and more

**Book 1**
The Mysterious Abductions
Lexile Ranking: 530L
Fountas & Pinnell Level S
232 pages | Over 34 four-color illus.
HC ISBN: 978-1-944020-00-2
PB ISBN: 978-1-944020-02-6

**Book 2**
The Ominous Eye
Lexile Ranking: 580L
Fountas & Pinnell Level T
208 pages | Over 27 four-color illus.
HC ISBN: 978-1-944020-03-3
PB ISBN: 978-1-944020-10-1

**Book 3**
The Fallen Star
Lexile Ranking: 630L
Fountas & Pinnell Level S
208 pages | Over 23 four-color illus.
HC ISBN: 978-1-944020-05-7
PB ISBN: 978-1-944020-07-1

**Book 4**
The Hidden Kingdom
Lexile Ranking: 630L
Fountas & Pinnell Level T
208 pages | Over 50 four-color illus.
HC ISBN: 978-1-944020-11-8
(PB on sale 2/2019)

Grow & Read Early Reader Books Ages 5-7
Trim: 6” x 9” • Paper Over Board $12.99 • Paperback $5.99
Four-color illustrations throughout
Bonus content includes fun facts about animals

**The Moonlight Meeting**
Lexile Ranking: 480L
Fountas & Pinnell Level L
PB ISBN: 978-1-944020-14-9
